Based on research presented at The Harvard Business School's first-ever conference on business approaches to poverty alleviation, *Business Solutions for the Global Poor* brings together perspectives from leading academics and corporate, non-profit and public sector managers. The contributors draw on practical and dynamic how-to insights from leading BOP ventures from more than twenty countries world-wide. This important volume reflects poverty's multi-faceted nature and a broad range of actors—multinational and local businesses, entrepreneurs, civil society organizations and governments—that play a role in its alleviation.

A silent revolution is underway, as entrepreneurs challenge prevalent notions of business motives and methods to invent market-based solutions to eradicate social injustice. Yet many fail to succeed. Based on original research, the authors uncover why impressive solutions fail to scale up, featuring global case studies and practical solutions.

"It argues convincingly that companies should look at what solutions they can provide consumers with, rather than looking at what products they can foist upon them ...This is an effective guide to delivering real value to the customer through genuine innovative thinking." (The Marketer). "One of the most successful business solutions tomes ever published." (PCPlus Business). Based partly on IBM's own transformation, and partly on the transformations that IBM has helped its clients to achieve, this ground-breaking book shows how companies can increase sales and improve margins by introducing a range of solutions. Highly readable, motivational and fast-paced, "Business Solutions On Demand" is packed with examples from many diverse industries. The authors emphasize that for today's business to compete and survive, it has to exceed the expectations of its customers. Technological advancement, globalization, increased competition, market saturation and easy access to information are all conspiring to make traditional business models redundant.

In *Entrepreneurship and Sustainability* the editors and contributors challenge the notion that not-for-profit social entrepreneurship is the only sort that can lead to the alleviation of poverty. Entrepreneurship for profit is not just about the entrepreneur doing well. Entrepreneurs worldwide are leading successful for-profit ventures which contribute to poverty alleviation in their communities. With the challenge of global poverty before them, entrepreneurs continue to develop innovative, business-oriented ventures that deliver promising solutions to this complex and urgent agenda. This book explores how to bring commercial investors together with those who are best placed to reach the poorest customers. With case studies from around the World, the focus of the contributions is on the new breed of entrepreneurs who are blending a profit motive with a desire to make a difference in their communities and beyond borders. A number of the contributions here also recognize that whilst much research has been devoted to poverty alleviation in developing countries, this is only part of the story. Studies in this volume also focus upon enterprise solutions to poverty in pockets of significant deprivation in high-income countries, such as the Appalachia region of the US, in parts of Europe, and the richer Asian countries. Much has been written about the achievements of socially orientated non-profit microfinance institutions. This valuable, academically rigorous but accessible book will help academics, policy makers, and business people consider what the next generation of more commercially orientated banks for the 'bottom billion' might look like.

As dot.com companies grapple with rigid market conditions and we keep hearing how the big technology players are being punished on Wall Street, it becomes easy to think of the Internet as a fad. The Internet frenzy may have subsided, but interest in the Internet as a business and marketing tool is still strong. It will continue to impact organizati

Electronic business, the integration of IT and the Internet into business processes, has begun to completely revolutionize business and the economy. The aim of this book is to point out the challenges and opportunities Europe and its companies are faced with in electronic business. The material is based upon the authors joint experience of years of research into the use of IT in business, industry, and government, as well as their management experience as President and CEO of leading technology organizations.
