detailed responses, and a series of Homework questions. At the end of each chapter is a table with a list of selected epidemiology text books with accompanying chapters in those books that the workbook chapter may supplement. The general learning outcomes (LOs) for this workbook are: 1. Become familiar with basic concepts and definitions commonly used in epidemiology 2. Define a public health problem 3. Identify appropriate uses and limitations of data and research design strategies for solving public health problems 4. Make relevant inferences from quantitative and qualitative data 5. Distinguish between statistical association and cause-effect relationships 6. Measure and describe patterns of disease incidence, prevalence, and mortality 7. Identify environmental factors and behaviors associated with health-related states or events 8. Be familiar with the steps for investigating disease outbreaks 9. Identify, calculate, and interpret common indices used in identifying the health status 10. Evaluate program effectiveness 11. Critically assess epidemiological research 12. Be able to communicate health findings Each chapter features:

- 10-20 mastery check questions with detailed answers
- 5 optional problems
- A case study
- A multiple choice, short answer quiz. (Answers to the cases and quizzes are provided as part of the online instructor resource package.)

Introduction to Epidemiology, Fifth Edition is a reader-friendly exploration of the basic principles of epidemiology and their application in solving current public health issues. Readers will learn how to identify and describe problems, formulate research hypotheses, select appropriate research study designs, manage and analyze epidemiologic data, interpret study results, and apply the results to prevent and control disease and health-related events. The Fifth Edition is a thorough revision that gives greater attention to real-world, contemporary public health problems involving both infectious and chronic diseases and conditions, making it an ideal introductory text for the epidemiology student with minimal training in the biomedical sciences and statistics.

An Introduction to Epidemiology, Fourth  
Edition is intended for introductory courses  
in health-related programs at both the  
advanced undergraduate and graduate levels.  
It is also a valuable reference for  
epidemiologists working in the field,  
industrial hygienists, infectious disease  
nurses, and staff epidemiologists.

This Companion Textbook supplements the  
ActivEpi CD-ROM, sold separately. The  
ActivEpi CD-ROM provides a multimedia  
presentation of concepts, commonly taught in  
an introductory epidemiology course. ActivEpi  
mixes a full array of media to motivate,  
explain, visualize and apply epidemiological  
concepts. Virtually all of the material on  
the ActivEpi CD-ROM is included in the  
Companion Textbook. Because individuals  
differ in their learning skills, the ActivEpi  
CD-ROM and the ActivEpi Companion Textbook  
offer readers different but related options  
on how to learn epidemiology. The Textbook  
can be used as a hardcopy reference of the  
textual materials contained on the CD-ROM, as  
a resource for the practice exercises, as a  
general reference, or even a self-contained

textbook. ActivEpi includes 15 lessons and over 50 hours of content via more than 250 launchable activities and homework exercises. It can be used in a variety of teaching formats: distance learning, self-paced learning, on-campus courses, and short courses. For the latest additions to ActivEpi, visit David Kleinbaum's website.

Based on the concept of ?conjecture and refutation? from the Popperian philosophy of science, i.e. looking for alternative causes, this book simplifies the design and inferences of human observational studies into two types: descriptive and causal. It clarifies how and why causal inference should be considered from the search for alternative explanations or causes, and descriptive inference from the sample at hand to the source population. Furthermore, it links the health policy and epidemiological concept with decisional questions, for which the basic measurement can be quality-adjusted survival time or quality-adjusted life year.
