This book, divided into three main parts, will offer a complete overview of the concept of corporate financial distress, emphasizing the different typologies of corporate paths included in this broad concept. It will reorganize and update academic literature about the evaluation of corporate financial distress from the first studies about failure prediction to the most recent contributions. It will also provide evidence about the evolution of going concern standards in both international and U.S. contexts. Moreover, an in-depth analysis of this broad concept will permit the identification of a set of research questions to be investigated from both theoretical and empirical points of view, and will be of interest to academic researchers and doctoral students of accounting, auditing and finance, professionals, and standard setters.

This book explores methods and techniques to predict and eventually prevent financial distress in corporations. It analyzes the effects of the global financial crisis on Italian manufacturing companies and, more specifically, whether the crisis has increased the number of firms that are likely to fail. In the first chapter, the authors widely discuss the Corporate Financial Distress as well as the process and costs incurred. The second chapter is based on a review of the most used statistical models, splitting them into accounting-based and market-based models. The following chapter is dedicated

to the methodology and the empirical analysis on Italian manufacturing companies from different industries. The last chapter presents practical evidence from Italian manufacturing companies during the recent financial crisis.

Philipp Jostarndt studies distress-induced changes in ownership and control, success factors in distressed equity infusions, and firms' choice between in- and out-of-court debt restructurings. In addition, he analyzes the determinants of survival, acquisition, and bankruptcy as alternative paths to exit financial distress. He includes both the firm perspective as well as the market valuations of the undertaken restructurings and, where applicable, relates the findings to the microstructure of Germany's revised bankruptcy legislation.

Financial distress and crises for businesses can be used to implement substantial organizational changes and turnaround the damage done to achieve financial equilibrium in the short term and financial stability in the long term. Plans, methodology and tools are provided here to examine how this turnaround can be achieved.

?The work of Martin Schmuck empirically investigates the phenomenon of financial distress and corporate turnaround in the automotive supplier industry. Based on a sample of 194 publicly listed automotive suppliers, the effectiveness of managerial, operational, financial, and asset restructuring activities is analyzed in a multivariate research setting. Archetypes for successful turnarounds are identified and matched with strategies of non-distressed companies.
