~~Entrepreneurship and Management in Forestry and Wood ...~~

From the country studies it was difficult to find common structures on policies affecting forestry entrepreneurship. This is understandable because most policies in forestry are aimed at supporting sustainable forest management, wood production and ecological services of the forests rather than entrepreneurship as such.

Forestry has long been in a rather favourable position in offering a valuable raw material source in high demand. However, with rapidly changing end-user demands and cost competitiveness within the forest and wood chain as a whole, the industry is needing to adapt. Explaining entrepreneurial action as part of a chain of comprehensive value-added processes leads to a new perception of forest production and wood processing. This book applies the main concepts of modern managerial science to the world of forestry and is the perfect book for students studying forestry and wood processing, as well as entrepreneurs and managers within the sector. Topics are covered from an entrepreneurial perspective and include perspectives from accounting, finance, economics, supply chain management, marketing and strategy.

Forestry has long been in a rather favourable position in offering a valuable raw material source in high demand. However, with rapidly changing end-user demands and cost competitiveness within the forest and wood chain as a whole, the industry is needing to adapt. Explaining entrepreneurial action as part of a chain of comprehensive value-added processes leads to a new perception of forest production and wood processing. This book applies the main concepts of modern managerial science to the world of forestry and is the perfect book for students studying forestry and wood processing, as well as entrepreneurs and managers within the sector. Topics are covered from an entrepreneurial perspective and include perspectives from accounting, finance, economics, supply chain management, marketing and strategy.

What is the situation and perceived future outlook for forestry in Central Europe? What is the role of innovation and entrepreneurship as main driving forces for economic growth, competitiveness and employment creation? Research results of the EFI Regional Project Centre INNOFORCE provide new knowledge on the sector's innovation and entrepreneurial behaviour as well as on policy measures necessary to enhance innovation and entrepreneurship in the region. Survey results are accompanied by lessons learned from more than 30 cases referring to innovations in forestry implemented in eight Central European countries.

Forests are under tremendous pressure from human uses of all kinds, and one of the most significant threats to their sustainability comes from commercial interests. This book presents a comprehensive examination of the interactions between the forest products sector and the

sustainability of forests. It captures the most current sustainability concerns within the forestry sector and various sustainability-oriented initiatives to address these. Experts from around the world analyze interconnected topics including market mechanisms, regulatory mechanisms, voluntary actions, and governance, and outline their effectiveness, potential, and limitations. By presenting a novel overview of the burgeoning field of business sustainability within the forestry sector, this book paves a way forward in understanding what is working, what is not working, and what could potentially work to ensure sustainable business practices within the forestry sector,

Forests are the dominant terrestrial ecosystem of Earth. They are distributed across the globe. Forests account for 75% of the gross primary productivity of the Earth's biosphere, and contain 80% of the Earth's plant biomass. Human society and forests influence each other in both positive and negative ways. Forests provide ecosystem services to humans. Forests can also impose costs, affect people's health, and interfere with tourist enjoyment. This publication presents reviews and research results on negative and positive human interference on forests, as well as ecology, management, governance, policy and economic issues. The book consists of four sections with 12 chapters derived from around the world.

Innovation in Forestry Territorial and Value Chain Relationships Edited by Gerhard Weiss, Davide Pettenella, Pekka Ollonqvist and Bill Slee Innovation is increasingly recognized as a key factor in environmental protection and sustainable development in forestry and forest-based industries. This volume provides a comprehensive theoretical foundation for the analysis of innovation processes and policies in a traditional, rural sector as well as presenting empirical analyses of innovation processes from major innovation areas. Innovative solutions are analysed in wood-related value chains, including timber-frame construction, furniture, bio-energy and forest transportation. Territorial services of the forest sector are examined, including various types of forest ecosystem services such as carbon sequestration, non-wood products and recreation. Innovation in Forestry is essential reading for researchers and policy makers in forestry and environmental sciences.

Sustainable development has always been a contested concept and has been extensively debated over the last 30 years with new classifications arising since then. There was a previous push for the radical transformations of the market economy to downscale production and consumption that would increase human well-being and enhance ecological conditions. Because of this conflict, there was a need for a new model that challenges and could be the alternative for the linear economy; this new model is called the circular economy. A circular economy aimed at eliminating waste and the continual use of resources. It gained its ground in the era of disruptive technological advancement and a dynamic global value chain. By supporting resource-efficient industrial models, the circular economy preserves and improves natural capital, optimizes the value of resources, and abolishes negative environmental externalities such as pollution. Examining the Intersection of Circular Economy, Forestry, and International Trade explores the link between the circular economy and various aspects of the business and environment to understand the usage and viability of adapting the circular economy from a business perspective. The chapters highlight the transition to the circular economy, its implementation across society, its intersection with forestry and international trade, and the solutions and challenges of the circular economy. This book is aimed at researchers in the field of business management, economics, and environmental studies along with practitioners, stakeholders, researchers, academicians, and students looking for more information on the various fields impacting the circular economy as well as the implementation, usage, and viability of a widespread adoption of a circular economy.

1. Key Areas in Agribusiness 2. Production for Agribusiness 3. Marketing and Trade for Agribusiness

This book transfers the newest service research concepts, such as value co-creation, to family forestry context. The book is aimed at as learning material for higher-education students in Western economies, and as a handbook for forest scientists worldwide. It has a strong theoretical base, but also a practical orientation with examples of novel forest services from different regions and contexts. The five parts of the book are: I Conceptualization of Service Approaches in Family Forestry; II Market and Policy Environment; III Public Service and Business Innovations; IV Communication, Cooperation, and Organizations for Services; and V Transitions Governance. Each part begins with a chapter that is more conceptual and thus sets the stage for the subsequent chapters, which then focus on a regional perspective or some more specific theme under the part's coverage.
