This book shows you how to build and modify your own wifi camera based commercial quality portable wireless security, surveillance, and spy system appropriate for use at home, or during travel. This system uses only an Android cell phone or tablet (operating system 2.2 and above), a TI CC3200 Launchpad or ArduCAM CC3200 UNO, and a TI Camera Booster Pack with MT9D111 digital camera or just an ArduCAM MT9D111 digital camera if you are using an ArduCAM CC3200 Uno which has a built in camera interface. This book shows you how to build and modify your own alarm system that detects the motion of an intruder, calls out to an emergency phone number and sends emergency text messages using an Android cell phone or just alerts you to the intruder using an Android tablet. This alarm system is compact enough to also provide portable security for travelers using hotels and motels or you can use this as a hidden spy camera system. You can also use the security system for high quality continuous real time surveillance of your property. The live video feed is shown on the Android device. The camera can be set to only record pictures where there is movement so you can easily view any saved images to determine what kind of intruder was detected. The image data is stored locally on the Android device and does NOT require payment of storage fees as with some home security company plans. This book will also go into the technical details of the hardware set up as well as the author created Android and TI CC3200 SimpleLink software. With these technical details you will be able to customize and expand these systems to suit your specific needs for your own personal use. This book also serves as a quick start guide for people interested in learning how to program wifi communication between an Android and a TI CC3200 SimpleLink device. Who is this book for? This book for people that: \* Want a quick start guide to wifi communication between an Android device and a TI CC3200 SimpleLink device using a camera. \* Travel often and need a low cost, no contract, portable security solution when living in motels and hotels. \* Want to secretly monitor a wife, husband, girlfriend, boyfriend, employee, co-worker and/or other people or even animals without their knowledge and have real time notifications sent to your cell phone. Key Feature Summary: \* Shows you how to build and modify your own portable wifi camera based commercial quality wireless home or portable security, surveillance, and spy system with real time emergency notification phone call out and text message notifications to your main cell phone. \* The home security system presented in this book is easy to assemble and does not require the use of breadboards or soldering. \* Follow the detailed "Hands on Example" and install the pre-made software created by the author on your Android and TI CC3200 SimpleLink devices and get a working commercial quality video surveillance system, or an intruder alarm system up and running quickly \* This book explains the author created source code for the Android and TI CC3200 SimpleLink devices so you can customize the home security system yourself for your own specific needs for personal use. Table of Contents: Chapter 1: Introducing the ArduCAM CC3200 UNO Chapter 2: TI CC3200 SimpleLink Programming Language Basics Chapter 3: The Android Controller and Wifi Communication Chapter 4: The CC3200 and Wifi Communication Chapter 5: Motion Detection Using a Camera Chapter 6: The Android Wireless Security System Design Chapter 7: The CC3200 SimpleLink Wireless Security System Design Chapter 8: Hands on Example: Building an Android and ArduCAM CC3200 UNO Security System Chapter 9: Deploying your GotchaCAM Wireless Intruder Alarm and Surveillance System

A handy guide to hiring handymen Don't Sweat It-Hire It! Is a fun, easy-to-understand guide to hiring professionals to do your home repairs and improvements. It caters to the BIY (buy-it-yourself) consumer, who prefers to hire work done rather than do their own home projects-the fastest growing trend in home improvement. All types of residential maintenance and improvement specialists are included in this book, ranging from the neighborhood lawn care person to construction general contractors specializing in major remodeling and renovation. Readers will learn how to find good, dependable resources, how to check references and work histories, how to negotiate fees and contracts, how to communicate with professionals and supervise their work, and what to do when things don't go exactly as expected. The book includes sample contracts and schedules that readers can use to create contractual agreements, and an extensive list of resources to help consumers find and manage good home repair and improvement specialists.

The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics.

This book explores a range of important theoretical and practical issues in the field of computational network application tools, while also presenting the latest advances and innovations using intelligent technology approaches. The main focus is on detecting and diagnosing complex application performance problems so that an optimal and expected level of system service can be attained and maintained. The book discusses challenging issues like enhancing system efficiency, performance, and assurance management, and blends the concept of system modeling and optimization techniques with soft computing, neural network, and sensor network approaches. In addition, it presents certain metrics and measurements that can be translated into business value. These metrics and measurements can also help to establish an empirical performance baseline for various applications, which can be used to identify changes in system performance. By presenting various intelligent technologies, the book provides readers with compact but insightful information on several broad and rapidly growing areas in the computation network application domain. The book's twenty-two chapters examine and address current and future research topics in areas like neural networks, soft computing, nature-inspired computing, fuzzy logic and evolutionary computation, machine learning, smart security, and wireless networking, and cover a wide range of applications from pattern recognition and system modeling, to intelligent control problems and biomedical applications. The book was written to serve a broad readership, including engineers, computer scientists, management professionals, and mathematicians interested in studying tools and techniques for computational intelligence and applications for performance analysis. Featuring theoretical concepts and best practices in computational network applications, it will also be helpful for researchers, graduate and undergraduate students with an interest in the fields of soft computing, neural networks, machine learning, sensor networks, smart security, etc.

The 36-Hour Day is the definitive dementia care guide.

Predicts how the internet revolution of the past decade will impact and shape the future, tracing how interactivity is evolving and providing business professionals with key information on how to understand the "connected world" of customers, companies, and service providers. Original.

This book responds to the growing need to secure critical infrastructure by creating a starting place for new researchers in secure telecommunications networks. It is the first book to discuss securing current and next generation telecommunications networks by the security community. The book not only discusses emerging threats and systems vulnerability, but also presents the open questions posed by network evolution and defense mechanisms. It is designed for professionals and researchers in telecommunications. The book is also recommended as a secondary text for graduate-level students in computer science and electrical engineering.
