Many changes have been made in this edition, first to the nomenclature so that the book is in agreement with the International System of Units (S. I. ) and secondly to the circuit diagrams so that they conform to B. S. S. 3939. The book has been enlarged and now has 546 problems. Much more emphasis has been given to semiconductor devices and transistor circuits, additional topics and references for further reading have been introduced, some of the original problems and solutions

have been taken out and several minor modifications and corrections have been made. It could be argued that thermionic-valve circuits should not have been mentioned since valves are no longer considered important by most electronic designers except possibly for very high power or voltage applications. Some of the original problems on valves and valve circuits have been retained, however, for completeness because the material is still present in many syllabuses and despite the advent and proliferation of solid-state devices in recent years the good old-fashioned valve looks like being in existence

for a long time. There are still some topics readers may expect to find included which have had to be omitted; others have had less space devoted to them than one would have liked. A new feature of this edition is that some problems with answers, given at the end of each chapter, are left as student exercises so the solutions are not included. The author wishes to thank his colleagues Professor P. N.

on trade, monetary, and environmental issues. It provides a comprehensive treatment of major developments in the global economy and is suitable for adoption as a primer in undergraduate courses in international political economy. The author takes a stand that is supportive of globalization in principle, while acknowledging that there are many areas of inequity that disadvantage developing countries. This is explored in chapters that deal with trade, debt crises, and the environment. Students will find that the material is presented in a readable format that does not presuppose prior

applications of the two main topic areas of the discipline. For both international trade and international finance, an intuitive introduction to theory is followed by detailed coverage of policy applications. With this new tenth edition, the author team of Nobel Prize-winning economist Paul Krugman, renowned researcher Maurice Obstfeld, and Marc Melitz of Harvard University continues to set the standard for International Economics courses. Debate-style readers can be effective and provocative teaching tools in the classroom. But if the readings are not in dialogue with one another, the crux of the debate is lost on students, and the reader fails to add real depth to the course. Controversies in Globalization solves this issue by inviting 15 pairs of scholars and practitioners to write specifically for the volume, directly addressing current and relevant questions in international relations through brief "yes" and "no" pieces. Providing students with necessary context, the editors offer
