Ethan is only in grade one and already has been kicked out of one school due to his tantrums and pattern of running away when in a panic. Now, his mom's enrolled him in a new school but remains glued to her phone, waiting for the call to tell her to come pick him up, that they can't handle him, that they don't know what to do with a child who has autism. How can she trust these strangers to look after her son, just one small child among hundreds, when he has run from own parents so very many times? They don't know the terror of losing your child in a mall or watching him run blindly into traffic. What started as a fun chase game when Ethan was a toddler has turned into a terrifying deviation. The adults in his life never know when he might take off. Rather than attaching an adult to his side to keep him safe, this new teacher talks about calming strategies and choices. Do they not realize what could happen if Ethan flees the building? The impact of a car on one small body? Sara is about to learn if this new school is up to the challenge. Meet Kyle, Mel, Ben and the other characters you got to know in the Amazon bestseller *Autism Goes to School*. See what they've been up to in the last year and how they join forces to help Ethan. Then, return to Madson School to see if Manny, a child with severe autism belongs in their midst. Read Manny's story in *Autism Belongs*. Dr. Sharon A. Mitchell has worked as teacher, counselor, psychologist and consultant for several decades. Her Masters and Ph.D. degrees focussed on autism spectrum disorders and helping kids to reach as high a level of independence as possible. One in sixty-eight American children has an autism spectrum disorder and one in every forty-two boys. Every teacher will have a child with autism in their classroom. Every coach will meet a child with autism. If autism has not touched your family, it will affect your friends or neighbors. When parents receive the news that their child has autism, they spend countless hours researching the subject, usually at night, after an exhausting day. There is a lot of information out there, much of it by competent authorities. But after a hard day of work and family responsibilities, who wants to read a textbook? What if you could just read a good story and still gain ideas to try? Yes, life with autism has it's struggles, but there are strengths as well and the fun parts that any family experiences. So, the novel "*Autism Goes to School*" was born - a story about a single dad doing the

best he can with his five year old son. The book's full of the challenges inherent in autism plus strategies that make life easier for all concerned. It's followed by *Autism Runs Away*. When six year old Ethan gets overwhelmed, he flees blindly. One school has already asked him to leave, fearing that they can't keep him safe. Will his new school be up to the challenge? Book 3 in the series, *Autism Belongs*, is about Manny and his family. Manny is nonverbal and as he has grown, so does his level of aggression. His parents cope the best they can, remaining cocooned in their home, tiptoeing around their son. When he's invited to go to school, his parents can't believe that he'd belong. In *Autism Talks and Talks*, Karen is a highly verbal 12 year old who finds social situations hard. Join the kids and staff of Madson School as they learn and grow and welcome others with special needs into their midst. The fifth book in the series, *Autism Grows Up*, shows what life too often becomes for high functioning young adults on the spectrum, and ways to make positive changes. *Autism Boxed Set - Purchase Autism Goes to School, Autism Runs Away and Autism Belongs e-books packaged together for one low price. My story is based on my experience in raising an autistic child and to also help raise autism awareness that these special children can become such a wonderful addition to our society. As autism has become such an epidemic these days, I feel my story may benefit any parent or parents who may feel so lost, confused, having chronic unhappiness, desperation, feeling guilty and so saddened by the autism diagnosis for their special child. Us parents must devote most of our time to accomplish this significant progress. Hopefully, you will find genuine happiness of what you and your child can and will have accomplished. My story will hopefully be very helpful to you and change your entire concept that autistic children can become successful, independent and productive in life, no matter what negativity is ever told to you.

Through her questioning of traditional approaches regarding autism, and with determination and patience, Florica Stone has been able to develop a satisfying and supportive two-way channel of communication with her once non-verbal and solitary autistic son. In *Autism - The Eighth Colour of the Rainbow* Florica shows how shared meanings can be learnt and expressed between autistic and non-autistic individuals, though they experience radically different perceptions of reality. Through interacting with and listening to her autistic friends and son, she began to understand the autistic learning style and to decipher the various behavioural needs that arise from their particular sensory processing. In this inspiring, much-needed guide she presents ways of creating autistic-friendly environments, modifying traditional responses to autistic behaviour and using literal learning, and provides many useful examples and exercises. This book will help parents, teachers and professionals to learn how to interact meaningfully with autistic children, continuously enhance communication and bring about long-lasting

changes.

This is a book we all should read. A remarkable human story, a remarkable piece of writing.' - Jon Snow, journalist and broadcaster
'Compelling, moving, honest' - Dr Michael Fitzpatrick, author of Defeating Autism: A Damaging Delusion 'I loved this book. Vivid and lively writing draws a picture of the ups and downs of family life with a child with autism. The overwhelming love she feels for her children and her spirited responses to setbacks are a joy.' - Clare Coombe-Tennant, trustee of TreeHouse Sheila Barton's memoir of autism is inspiring. Finding herself, at thirty years old, with a son with autism and severe learning disabilities, she set about learning how to live a different kind of life and be a different kind of mother. This is the story, told with passion, intelligence and humour, of their journey from darkness into light. It is written out of anguish and anger, but also out of hope and love. The book tells the amazing story of their life together and how they dealt with diagnosis, birth, school, brothers and sisters, travel, therapies, obsessions, grief and sex. Sheila writes movingly of the heartbreak and the joy, the terror and the liberation. This is the story of the triumph of hope and love over pain and sadness, and it is a compelling manifesto for greater understanding of those who are born 'different'. Its ending is one of empowerment and joy.

This book presents a unique exploration of common myths about autism by examining these myths through the perspectives of autistic individuals. Examining the history of attitudes and beliefs about autism and autistic people, this book highlights the ways that these beliefs are continuing to impact autistic individuals and their families, and offers insights as to how viewing these myths from an autistic perspective can facilitate the transformation of these myths into a more positive direction. From 'savant syndrome' to the conception that people with autism lack empathy, each chapter examines a different social myth - tracing its origins, highlighting the implications it has had for autistic individuals and their families, debunking misconceptions and reconstructing the myth with recommendations for current and future practice. By offering an alternative view of autistic individuals as competent and capable of constructing their own futures, this book offers researchers, practitioners, individuals and families a deeper, more accurate, more comprehensive understanding of prevalent views about the abilities of autistic individuals as well as practical ways to re-shape these into more proactive and supportive practices.
