"Pack this one in your beach bag and get ready for nonstop fun." --- Susan Mallery, New York Times bestselling author, on *Barefoot in the Sand* As a professional gardener, Tessa Galloway can grow anything except the one thing she wants the most - a baby. Finally ready to take a chance on single motherhood by less-than-traditional means, her world is suddenly turned upside down when a sexy, mysterious new chef is hired for the resort in Barefoot Bay. Placed in the witness protection program after identifying his wife's killer, John Brown is on the cusp of getting back the only thing that matters - his toddler twins, taken into protective custody after the high profile crime that killed their mother. But when John learns the system requires him to prove he's married and stable before he can secure his children, he escalates the growing attraction for Tessa to a full-on seduction, leading right to the altar. But when love unexpected blooms between them, will his secret be the thing that uproots their happy ending?

Collaborative decision making processes are a form of communication inside organizations. Their functioning can teach lessons for the design of electronic office systems. Those processes are open ended and therefore decide themselves on their form. Like oral deliberations which cannot be modelled in advance any open ended communication process needs means for common control over the further advancement and the ending of the process. The history of German administrative practice and its special methods of using disposals for the control of common processes shows the creation of records as based on communication needs generated by the intention of joint actions. For electronic decision making processes the purposes remain the same, but the means have to

This report examines the challenges of advancing the use of electronic shipping papers as an alternative to the current paper-based hazardous materials communication system. Paper copy hazardous materials shipping papers have several drawbacks: they are labor intensive and subject to human error; they are perishable and may not be available to emergency responders in the event of an incident; and they are difficult to exchange between modes or different vehicles within a mode. The use of internationally compatible electronic data-sharing technologies could significantly improve the exchange of hazardous materials shipping information among shippers, carriers, regulatory agencies, and emergency responders. Timely access to accurate hazardous materials shipping information will likely reduce errors in information exchange, improve efficiency, enhance security, and improve the response efforts in the event of a hazardous materials incident.
