The analysis of the various ethical scandals focuses on concepts like ethical versus unethical leadership, received wisdom, the bottom?line mentality, groupthink and moral muteness, all of which contribute to the kind of organizational culture and ethical behavior one finds in an organization. The book discusses ethical decision making in general and the increased role of religion and spirituality, in confronting unethical behavior in contemporary organizations. The book also takes an in?depth look at the impact ethical scandals have on employees and more specifically the psychological contract and person?organization ethical fit with the goal of identifying, along with other things, what leaders can do to restore relationships with employees and rebuild the organization’s reputation in the eyes of various stakeholders.

Media and Power addresses three key questions about the relationship between media and society. *How much power do the media have? *Who really controls the media? *What is the relationship between media and power in society? In this major new book, James Curran reviews the different answers which have been given, before advancing original interpretations in a series of ground-breaking essays. This book also provides a guided tour of the major debates in media studies. What part did the media play in the making of modern society? How did ‘new media’ change society in the past? Will radical media research recover from its mid-life crisis? Is public service television the dying product of the nation in an age of globalization? Media and Power provides both a clear introduction to media research and an innovative analysis of media power.

Why do people turn to personal connections to get things done? Exploring the role of favors in social welfare systems in postwar, postsocialist Bosnia and Herzegovina, this volume provides a new theoretical angle on links between ambiguity and power. It demonstrates that favors were not an instrumental tactic of survival, nor a way to reproduce oneself as a moral person. Instead, favors enabled the insertion of personal compassion into the heart of the organization of welfare. Managing Ambiguity follows how neoliberal insistence on local community, flexibility, and self-responsibility was translated into clientelist modes of relating and back, and how this fostered a specific mode of power.

Exploring recent configurations of social relations in post-socialist, post-war, post-Yugoslav Bosnia and Herzegovina this collection of ethnographic research turns an analytical lens on questions of sociality. Contributions based on long-term, in-depth research projects explore how people in different parts of BiH make and remake social relations and outline how their practices of sociality relate to donor-set priorities and formal human rights provisions. The book explores the socio-political concerns which have emerged within BiH, incites interdisciplinary conversations and sheds critical light on ways of engaging with these concerns and discusses forms of sociality, politics and agency which remain largely absent from the official political discourse and practice of local and foreign actors. Explicitly focusing on social relations in BiH against the historical background of both war and Yugoslav socialism, and directly placing these in relation to authoritative discourses and policies regarding BiH today brings the different strands together while the commentaries of specialists who have studied BiH in different ways explicitly situates the contribution of ethnographic work in the country.

As politicians and the media perpetuate the stereotype of the "common criminal," crimes committed by the powerful remain for the most part invisible, or are reframed as a "bad decision" or a "rare mistake." This is a topic that remains marginalized within the field of criminology and criminal justice, yet crimes of the powerful cause more harm, perpetuate more inequalities, and result in more victimization than street crimes. Crimes of the Powerful: An introduction is the first textbook to bring together and show the symbiotic relationships between the related fields of state crime, white-collar crime, corporate crime, financial crime, organized crime, and environmental crime. Dawn L. Rothe and David Kauzlarich introduce the many types of crimes, methodological issues associated with research, theoretical relevance, and issues surrounding regulations and social controls for crimes of the powerful. Themes covered include: media, culture, and the Hollywoodization of crimes of the powerful; theoretical understanding and the study of the crimes of the powerful; a typology of crimes of the powerful with examples and case studies; victims of the crimes of the powerful; the regulation and resistance of elite crime. An ideal introductory text for both undergraduate and postgraduate students taking modules on the crimes of the powerful, white-collar crime, state crime, and green criminology, this text includes chapter summaries, activities and discussion questions, and lists of additional resources including films, websites, and additional readings.

A major new introduction to theories of public policy. The author provides an accessible assessment of a wide range of theories and models from policy cycles, policy transfer, rational choice and socio-economic explanations to multi-level governance, advocacy coalitions and punctuated equilibrium and of their value to policy analysis.--

Uses new critical approaches to demonstrate deep affinities in these vastly different filmmakers' philosophies on film, fantasy, and reality.

Nuclear power is in the midst of a generational change—with new reactor designs, plant subsystems, fuel concepts, and other information that must be explained and explored—and after the 2011 Japan disaster, nuclear reactor technologies are, of course, front and center in the public eye. Written by leading experts from MIT, Nuclear Systems Volume I: Thermal Hydraulic Fundamentals, Second Edition provides an in-depth introduction to nuclear power, with a focus on thermal hydraulic design and analysis of the nuclear core. A close examination of new developments in nuclear systems, this book will help readers—particularly students—to develop the knowledge and design skills required to improve the next generation of nuclear reactors. Includes a CD-ROM with Extensive Tables for Computation Intended for experts and senior undergraduate/early-stage graduate students, the material addresses: Different types of reactors Core and plant performance measures Fission energy generation and deposition Conservation equations Thermodynamics Fluid flow Heat transfer Imparting a wealth of knowledge, including their longtime experience with the safety aspects of nuclear installations, authors Todreas and Kazimi stress the integration of fluid flow and heat transfer, various reactor types, and energy source distribution. They cover recent nuclear reactor concepts and systems, including Generation III+ and IV reactors, as well as new power cycles. The book features new chapter problems and examples using concept parameters, and a solutions manual is available with qualifying course adoption.
