[This book] is a supplement to the texts, not a replacement. It is intended to maximize your success in this course, by showing you how to become involved in developing your own techniques for grasping the concepts of chemistry. Using a study outline, problem sets, problem examples, worked and unworked, and numerous self tests, with answers, this manual will provide you with opportunities to sharpen your skills and evaluate your comprehension of the material in [the texts]. The worked-out solutions at the end of this manual walk you, step-by-step, through the methods of arriving at the answer to those same problems which have an answer only in the answer key ... This is the third edition of the successful text-reference book that covers computational chemistry. It features changes to the presentation of key concepts and includes revised and new material with several expanded exercises at various levels such as 'harder questions' for those ready to be tested in greater depth - this aspect is absent from other textbooks in the field. Although introductory and assuming no prior knowledge of computational chemistry, it covers the essential aspects of the subject. There are several introductory textbooks on computational chemistry; this one is (as in its previous editions) a unique textbook in the field with copious exercises (and questions) and solutions with discussions. Noteworthy is the fact
