Hundreds of photos, many never published before, of Germany's rarely seen tank destroyers, including the Ferdinand, Elephant, and Jagdtiger Color illustrations focus on unit markings, numbering, and camouflage Accompanying text chronicles the unit's combat operations plus there are personal accounts from the men who rode in these mechanical monsters German Heavy Anti-Tank Unit 653 was equipped with the heaviest tank destroying vehicles of the German armed forces. Initially activated as an assault gun battalion and redesignated in April 1943, the 653 received its first Ferdinand heavy tank destroyers (later modified and renamed Elephants) in May 1943 and went into action on the Eastern Front a month later. In 1944, the unit converted to the even more massive Jagdtiger. The seventy-five-ton, heavily armored Jagdtiger was the behemoth of the battlefield and boasted a 128mm gun-as opposed to the Ferdinand's 88-with a range of more than thirteen miles, making it deadly despite its limited mobility. Outfitted with these lethal giants, the 653 saw service in Russia, Italy, Austria, and Germany.

Complete history of a German tank division that fought exclusively on the Eastern Front.

The Panzer Lehr Division, a German armoured division during World War II, was one of the most Elite units in the entire German Wehrmacht Heer. It was formed in 1943 from various units of elite training and demonstration troops stationed in Germany, to provide additional armoured strength for resisting the anticipated Allied invasion of western Europe. Its great weakness was that it concentrated the cream of Germany's tank commanders and instructors in a single unit. Due to its elite status it was lavishly equipped in comparison to the ordinary Panzer divisions, though on several occasions it fought almost to destruction, in particular during Operation Cobra. For the first time in English, this book follows the division from Normandy and the Battle of the Bulge to the end of the war, showing how Germans fought Americans at St. Lô and Bastogne. Written in Kurowski's trademark you-are-there style, this includes numerous firsthand accounts based on interviews with veterans.

In this book, noted historian of the Battle of Kursk Valeriy Zamulin, the author of multiple Russian-language books on the Battle of Kursk and *Destroying the Myth: The Tank Battle at Prokhorovka, Kursk, July 1943: An Operational Narrative* takes a fresh look at several controversial and neglected topics regarding the battle and its run-up. He starts with a detailed look at the Soviet and Russian historiography on the battle, showing how initially promising research was swamped by Party dogma and censorship during the Brezhnev area, before being resumed with the collapse of the Soviet Union. Zamulin then transitions to discussions of how the southern shoulder of the Kursk bulge was formed, preparations for the battle on both sides, and the size and composition of Model's Ninth Army. He then examines such controversial topics as whether or not the II SS Panzer Corps was aware of the pending Soviet counterattack at Prokhorovka, and the effectiveness of the Soviet preemptive barrage that struck the German troops that were poised to attack. Zamulin also discusses whether or not General Vatutin, the Commander-in-Chief of Voronezh Front, erred when arranging his defenses. Zamulin also takes a look at how the myth of 1,500 tanks colliding on a narrow strip of farm fields became perpetuated in Soviet and foreign history books, when in fact it was impossible for the 5th Guards Tank Army's tanks to attack in

massive wave after wave due to the constrictions of the terrain. Zamulin also reveals incidents of the battle that were long kept “ behind the curtain ” by Soviet censorship. For example, the 183rd Rifle Division defending the Prokhorovka axis was repeatedly struck by friendly aircraft, and a Soviet tank counterattack overran the positions of one of its battalions. Zamulin discusses other cases of fratricide in the Voronezh Front, including the death of one of the 1st Tank Army ’ s foremost tank commanders in a friendly fire incident. In the process, he reveals that a wave of suicides swept through the junior command staff of the 5th Guards Tank Army immediately prior to the famous counteroffensive on 12 July 1943. All in all, Valeriy Zamulin with this collection of essays and articles, two of which have been reprinted from the Journal of Slavic Military History, makes a new contribution to our knowledge and understanding of this pivotal, epochal battle of the Second World War.
