This book demonstrates the challenges and opportunities of climate change actions in developing countries and primarily focuses on case studies in Indonesia, the world ' s fourth most populous country. The most important feature of the book is its examination of multiple facets of climate change issues in Indonesia, which allows readers to understand the complexity of climate change in developing countries: the synergies and trade-offs between different climate change actions as well as between climate and development priorities. Another unique feature is that it was jointly written by Indonesian and international

authors, as well as by academics and development practitioners. This book addresses questions concerning mitigation measures in major sectors with original analyses of aspects including energy subsidies, sectoral energy efficiencies in manufacturing sectors, forest concessions, energy-saving labeling schemes, policy mixes for the urban transportation sector, and the introduction of waste-to-energy technologies. The book provides first-hand knowledge and data on energy and the institutional realities in Indonesia, which are not widely and readily available to an international audience. It offers a valuable reference guide for professionals working for governments and NGOs and donor agencies in the fields of climate change and development in developing countries. This work is also a valuable resource for undergraduate and graduate students of economics and environmental and development studies, in particular those who are interested in the synergies and conflicts between climate change and development.

The Intuitive Guide to Energy Efficiency and Building Improvements Energy Audits and Improvements for Commercial Buildings provides a comprehensive guide to delivering deep and measurable energy savings and carbon emission reductions in buildings. The 2002 assessment report, produced under the Montreal Protocol on ozone depleting substances, finds that technical progress has been made by the refrigeration, air conditioning and heat pump industry to comply with requirements to phase out CFCs and in several applications, HCFCs as well. However, there is still a significant amount of installed refrigeration equipment still using CFCs and HCFCs, and so service demand remains high and is best minimised by preventive service, containment, retrofit, recovery and recycling.

About The Book: The ' Key of Interior Design ' is a book which may unlock the door leading towards the realm of Interior Design for the Interior design aspirants or beginners, by providing them detailed but
