Time-saver standards for building types by Joseph De Chiara, John Hancock Callender, 1983, McGraw-Hill International Book edition, in English - 2nd ed. [reprinted]. Time-saver standards for building types (1983 edition) | Open Library

This book is the basic reference source for design criteria for all major types of buildings. It offers vast amounts of information on the essential component elements of each building. A true classic in the industry.

Covers structures and places as diverse as residences, museums, libraries, and theaters, hospitals and nursing homes, churches, air and truck terminals, retail shops, restaurants, hotels, industrial parks, playgrounds, and arenas. This is a worthy competitor to Architectural graphic standards. It is illustrated with hundreds of plans, diagrams, tables, and schematics which help in the design of more functional, meaningful, and interesting buildings. De Chiara and Callender provide detailed information on the essential components of each building type, emphasizing the characteristic functions involved. This edition offers new information on facilities for such purposes as education, justice and correction, entertainment, health, and sports and recreation. The book features special sections on housing for the elderly and the handicapped, including access for the handicapped to public and government buildings.

本书内容涵盖了建筑历史、建筑理论和设计作品,堪称一部图文并茂的建筑百科宝典.

The 1st Edition of Time-Saver Standards for Building Types has been an important part of my professional library since its publication in 1973. As stated in its preface: "It is intended to give basic design criteria for each major type of building. It will give those unfamiliar with a specific building type a talking or working knowledge of its functions, organization, and major components." Over the years, I have referred to Time-Saver frequently for planning and design guidelines for building types such as gymnasiums, airport terminals, and police stations. But as the 1st Edition is now 17 years old and much of it is based on other even older versions of Time-Saver Standards, I have begun to find the book inadequate for contemporary design practice. The past two decades have been a period of profound change for building planning and design. Many building requirements have changed and entire new categories of buildings have evolved. It was with enthusiasm that I looked forward to the 3rd Edition; which the publisher promised would be "revised, expanded, and completely brought up to date." I am greatly disappointed with the result. While the 3rd Edition has been expanded to approximately 1400 pages, nearly a third more than the 1st Edition, little of the original material has been revised and the updating has been insufficient.

An important addition to the Time-Saver Standards Series, this book offers top-flight guidance for architects and builders who need to select any type of product, system, component, material, or assembly for any job. Provides easy-to-understand guidance on how various materials function, considers key issues in product selection, and offers general information on the full range of product types. Organized by CSI MasterFormat--the product specification system most commonly used in construction and in the Sweet's catalogs. Cross-referenced to the UniFormat system, which indexes products by the sequence of assembly in design and construction--a real plus when engaged in preliminary design and cost-estimating.

Revised edition of Time-saver Standards for Residential Development (1984). A hefty volume which comprises a master file of data on design standards and criteria that lead to livable environments. Coverage includes neighborhood organization, site considerations, subdivisions and land planning, community facilities, elements of the dwelling unit, types of single-family houses, and of apartments and apartment buildings, mobile homes and parks, rehabilitation and historic preservation, and safety and security. Abundantly illustrated with drawings and plans. Annotation copyright by Book News, Inc., Portland, OR
