The recent spate of threats to cultural heritage, including in Iraq, Mali, Nepal, Syria, and Yemen, has led to increased focus on the sources of international cultural heritage law. This edited volume shows that international cultural heritage law is not a discrete and contained body of law, but one whose component parts are drawn from diverse fields of public international law. It shows how cultural heritage law has been shaped by its interaction with other areas of international law, and how it has contributed to international law in turn. In this volume, scholars and practitioners explore some of the primary points of intersection between international cultural heritage law and public international law. Chapters explore intersections with the law of armed conflict, international and transnational criminal law, international human rights, the international movement, regulation, and restitution of cultural artefacts, and the UN system. The result is a cohesive collection that not only explores many facets of the intersections of cultural heritage law and public international law, but also examines how the regimes operate together and how the relationship between them largely facilitates, but also sometimes hinders, the development of international law governing the protection of cultural heritage.

of genetics in fruit flies to studies of cellular processes in genetically modified mice to recent dramatic developments in genetics, translational research, and personalized medicines, biomedical

This seventh annual report covers the 12 month period until the end of July 2004. The human rights report is designed to provide detailed information for Parliament and for other interested parties on the FCO's activities to promote human rights, democracy and good governance abroad. These activities cost over £12 million in 2003-04. The key human rights issues in some 20 countries, ranging from Afghanistan to Iraq and Zimbabwe, are described. The report also covers the course of international debate on human rights. Specific chapters deal with: human rights and conflict; economic, social and cultural rights; human rights and the rule of law; democracy, equality and freedom; women's rights and child rights.

This book addresses a wide range of contemporary operational maritime law issues across the spectrum of operations. It provides sophisticated analyses and insights, and offers new interpretations of topics that are directly relevant for contemporary naval operations. The book examines unresolved legal issues in order to provide guidelines for conducting maritime operations, and also offers reference material for general education on the law of naval operations. Further, it serves as a comprehensive resource for operational doctrine and military planning, and presents an approach to dealing with multiple legal issues that demonstrates how modern military operations at sea can legally be executed. Focusing on operational and tactical topics, it is a valuable addition to the bookshelves of military lawyers and operators alike.

A comprehensive examination of the legal limits to the military commander's assessment of military necessity during armed conflict.

Many people have the idea that the 'Great War' on the Western Front was simple, if ghastly, to fight – with few tactics, and unbroken, monotonous, trench lines as the main feature of the battlefield. In such a scenario the archetypal image of battle is of soldiers with rifles and bayonets charging each other in blind obedience to stupid repetitious orders. Though undeniably bloody the war was in fact a ferment of new ideas and new weapons. Gas, flame throwers, super-heavy artillery, concrete bunkers, tanks, aircraft and other innovations were all introduced, whilst older notions such as barbed wire, machine guns and armour took on a new lease of life. No single manual was ever enough to encompass 'modern war', and even before 1914 numerous publications were required. With the focus on the Western Front and the soldiers fighting there, this unique compendium collects together a huge variety of contemporary manuals, leaflets and booklets, and shows how although operations often failed, British commanders made attempts to devise new tactics and weaponry.

In *First Do No Harm: Medical Ethics in International Humanitarian Law* Sigrid Mehring provides a comprehensive overview of the legal and ethical framework guiding physicians in armed conflict. Due to its timeliness, the book is invaluable to practitioners and legal scholars alike.
