The purpose of this book is to expose industry, who has enlisted the help of our government and the mainstream media in a silent scheme that softly kills many people. Hopefully this book will pressure our leaders in Congress to seek the truth and pass legislation to help solve these issues. A careful analysis of independent American and global scientific literature on health and diseases, as well as health care statistics, have led to the conclusion that a major "Root Cause" of this rise in our health issues is in our food. Specifically, it is the residues of a slow-acting tasteless poison - glyphosate. This weed killer, now applied directly to the engineered crops, are declared as probably carcinogenic, by the International Agency for Research on Cancer (IARC). Glyphosate has now been found in about 93% of Americans' bodies per sample test.If you have any doubt about the accuracy of this book, please check out the 782 references in this book or independent sources for yourself. Glyphosate poison not only kills weeds, it reduces our body's serotonin level, which harms our mood and increases suicides, but also harms our health. Historians will write in disbelief about our congress willingness to sacrifice our kids and continue this practice of "Crimes against Humanity." It is hoped this book will challenge President Donald Trump to form a special independent team to explore and introduce recommended legislation. The chapters covered in this book with 396 pages and 149 charts and figures are 1 Our Health Issues are Rising at Alarming Rates. 2 One of the "Root Causes" of our Alarming Rise in Health Care Cost Needs to be Addressed. 3 Additional Health Issues Also Needs to be Reduced - Autism, Cancer, Obesity, and Many More 4 Suicides & Violence are Increasing and Moods are Declining Due to Glyphosate Poison in Our Food 5 America's Regulatory Agencies Position Concerning Glyphosate is Wrong and the EPA was Tricked 6 Banning Glyphosate and Safeguarding Against Glyphosate Poison in Our Food 7 Vaccines Could be Safer by Eliminating Heavy Metals with A Slight Cost Increase 8 Reducing the Suicide Rate and Improving Gun Safety Will Help Make America Great Again 9 How to Help Reduce the Opioid Crisis and Also Reduce Illegal Drugs 10 Reducing the Use of Psychiatric Drugs Will Also Reduce the Mass Murder Rate 11 Kicking the Drug Habit in Three Steps - A Strong Belief System Helps 12 A Strong Belief System Helps One Avoid Illegal Drugs and Christianity is the Correct Religion. 13 Info on Muslims That Promote Violence by Following The Quran 14 Non-Religious Beliefs of Atheism and Evolution Doesn't Make Common Sense 15 Many of Our Leaders in Government, Media, and Industries are Corrupt 16 Our Government is Infringing on Our Privacy 17 Our Dual Justice System is Not Fair to All 18 The Federal Reserve System (FED) is a Scam and Needs an Audit 19 The Mainstream Media is Often Fake and Omits Major Stories to Fit Their Narrative 20 "Big Pharma" & the AMA's Main Goal is High Profits Instead of Solving Our Health Issues. A Comprehensive Look at the Worldwide Battle to Defend Ourselves and Our Environment Against the Peddlers of Chemical Poisons Chemical poisons have infiltrated all facets of our lives – housing, agriculture, work places, sidewalks, subways, schools, parks, even the air we breathe. More than half a century since Rachel Carson issued Silent Spring – her call-to-arms against the poisoning of our drinking water, food, animals, air, and the natural environment – The Fight Against Monsanto's Roundup takes a fresh look at the politics underlying the mass use of pesticides and the challenges people around the world are making against the purveyors of poison and the governments that enable them. The scientists and activists contributing to The Fight Against Monsanto's Roundup, edited by long-time Green activist, Mitchel Cohen, explore not only the dangers of glyphosate – better known as "Roundup" – but the campaign resulting in glyphosate being declared as a probable cancer-causing agent. In an age where banned pesticides are simply replaced with newer and more deadly ones, and where corporations such as Monsanto, Bayer, Dow and DuPont scuttle attempts to regulate the products they manufacture, what is the effective, practical, and philosophical framework for banning glyphosate and other pesticides? The Fight Against Monsanto's Roundup: The Politics of Pesticides takes lessons from activists who have come before and offers a radical approach that is essential for defending life on this planet and creating for our kids, and for ourselves, a future worth living in.

Residues offers readers a new approach for conceptualizing the environmental impacts of chemicals production, consumption, disposal, and regulation. Environmental protection regimes tend to be highly segmented according to place, media, substance, and effect, academic scholarship often reflects this same segmented approach. Yet, in chemical substances we encounter phenomena that are at once voluminous and miniscule, singular and ubiquitous, regulated yet unruly. Inspired by recent studies of materiality and infrastructures, we introduce "residual materialism" as a framework for attending to the socio-material properties of chemicals and their world-making powers. Tracking residues through time, space, and understanding helps us see how the past has been built into our present chemical environments and future-oriented regulatory systems, why contaminants seem to always evade control, and why the Anthropocene is as inextricably harnessed to the synthesis of carbon into new molecules as it is driven by carbon's combustion.

GLYPHOSATE The Real Culprit behind Gluten Sensitivity KARIN C. HOLSTEIN PhD KARIN C. HOLSTEIN, PhD, Health Advocate and Spokesperson, Entrepreneur and Honorary Ambassador of the Desert Food Foundation (with an MA in Nutrition and a PhD in Business Ethics) was diagnosed in 2014 with gluten sensitivity. After years of struggling with undiagnosed health issues, she went on a strict gluten-free diet with supplements, and has since been able to manage her condition. It prompted her to write this informative investigational book, revealing that not gluten but glyphosate is the real culprit behind gluten sensitivity. The European Union is still divided over contradictory scientific assessments whether to ban or to allow the use of glyphosate in the EU. Aisha Dodwell, a food campaigner with Global Justice Now said: "The decision on glyhposate is a critical test of whose interests the EU is acting on. On one side, there are powerful agrbusiness companies like Monsanto, whose Roundup weed killer contains glyphosate and accounts for a third of its total sales. And on the other side you have over a million citizens from across the EU who have signed petitions saying that they don't want to be exposed to chemicals that are probably causing cancer."

International law's rich existence in the world can be illuminated by its objects. International law is often developed, conveyed, and authorized through its objects and/or their representation. From the symbolic (the regalia of the head of state and the symbols of sovereignty), to the mundane (a can of dolphin-safe tuna certified as complying with international trade standards), international legal authority can be found in the objects around us. Similarly, the practice of international law often relies on material objects or their image, both as evidence (satellite images, bones of the victims of mass atrocities) and to found authority (for instance, maps and charts). This volume considers these questions: firstly what might the study of international law through objects reveal? What might objects, rather than texts, tell us about sources, recognition of states, construction of territory, law of the sea, or international human rights law? Secondly, what might this scholarly undertaking reveal about the objects-as aims or projects-of international law? How do objects reveal, or perhaps mask, these aims, and what does this tell us about the reasons some (physical or material) objects are foregrounded, and others hidden or ignored. Thirdly what objects, icons, and symbols preoccupy the profession and academy? The personal selection of these objects by leading and emerging scholars worldwide will illuminate the contemporary and historical fascinations of international lawyers. By considering international law in the context of its material culture the authors offer a new and exciting theoretical perspective on the subject. With an image of each object reproduced in full colour, the book will make an engaging and interesting read for scholars, practitioners, and students alike.

This expanded third edition of The New Teacher Book grew out of Rethinking Schools workshops with early career teachers. It offers practical guidance on how to flourish in schools and classrooms and connect in meaningful ways with students and families from all cultures and backgrounds. Book Review 1: "I wish I had had The New Teacher Book when I started. But I have it now. We all have it now. Read it. Learn from it. Use it to change the world." -- Lily Eskelsen Garcia President, National Education Association Book Review 2: "This new edition of The New Teacher Book delivers powerful stories and lessons that will help new teachers infuse social justice ideals in their classrooms every day." -- Randi Weingarten President, American Federation of Teachers Book Review 3: "The New Teacher Book offers a roadmap for sustaining a career as a social justice educator. It's the kind of vision we need to fill classrooms with learning and hope." -- Linda Darling-Hammond Charles E. Ducommun, Professor of Education Emeritus, Stanford University
